## CAVEATS & DATA NOTES

**Model scope.** Try-scorer v3 (player anytime/2+, Poisson+Platt). Outcomes v6.18 (margin Ridge + total Ridge + win Logistic+Platt + goalkicking). Honest CV on n=265 matches R1-R10 2026 + 2025: margin MAE 11.30 (real lift), total MAE 12.21 (worse than baseline 11.04 — do NOT use for over/under bets), win AUC 0.596 (marginal).

**Known v6 weakness (backlog #19).** home\_/away\_ features are fixture-label averages, not venue-split — structural home bias. Most R11 P(home) > 0.50. v7 work.

**Goalkicking.** Per-team rolling conv rate from players.conversions/conversion\_attempts, decay  $\alpha=0.85$ , Bayesian shrinkage K=8 toward league mean 0.76.

**QA framework.** 11 automated checks from qa\_checks.py — EV math, outlier flag, no-history starters present, confidence taxonomy, spine-fade justification, headline=top-rank, §A bullet/table consistency, match-markets fenced, two-price discipline, capped-label consistency, Adj EV uniformity. Encoded from Titans/Knights v2→v6 review cycle.
